DETAILED ACTION

1. Upon further consideration of the claims and the amendments made to the specification, the Examiner has deemed a new restriction is required. The Restriction now requires the Applicants to specifically elect the combination of sequences for examination. Furthermore, this requirement is a restriction and not a species election. The Examiner apologizes for any inconvenience this may cause the Applicant.

Sequence Election Requirement

2. Instant claims 24-28 read on patentably distinct combinations of sequences. Each sequence is patentably distinct because they are unrelated sequences. Each unique combination of sequences is distinct because each combination are unrelated to other sequences. For a combination of sequences, the MPEP states, "Applications containing only composition claims reciting different combinations of individual nucleotide sequences will be subject to restriction requirement. Applicants will be required to select one combination for examination." (See MPEP 803.04). It is noted that the multitude of sequence submissions of examination has resulted in an undue search burden if more than one sequence is elected. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 36 CFR 1.141 et seq. Examination will be restricted to only the elected combination of sequences. It is additionally noted that this sequence election requirement is a restriction requirement and not a specie election requirement.

Please elect one combination of genes from one table. For example, if Table 5 is elected, please specify if the combination includes 60%, 70%, 80%, 90%, or all of the genes in Table 5. If a combination less than all of the genes is elected, please specify which of the genes are in the combination. For example, if 60% of the genes in Table 5 is elected, applicant must also state that Seq. IDs 1-6 are the genes in the combination. Examination will then proceed on Seq. Ids 1-6.

In addition, the Examiner requests that the Applicant identify any sequences in the elected combination that they believe to be novel to aid in the searching of the elected combination.

- 3. Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:
 - (a) the inventions have acquired a separate status in the art in view of their different classification;
 - (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
 - (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);

Art Unit: 1631

(d) the prior art applicable to one invention would not likely be applicable to another invention;

(e) the inventions are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete <u>must</u> include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable

Art Unit: 1631

over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jerry Lin whose telephone number is (571) 272-2561. The examiner can normally be reached on 10:00-6:30, M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Majorie A. Moran can be reached at (571) 272-0720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
